EDUCATION

University Of Mumbai Expected 2027

B.Tech in Electronics & Computer Science | Honours in Data Science CGPA: 9.25 / 10

EXPERIENCE

Intern – SAP Ariba | Bristlecone India Ltd. Dec 2025 – Feb 2026

- Gained end to end exposure to **upstream procurement** workflows on SAP Ariba, including **RFI**, **RFP** and **RFQ** creation, supplier evaluation frameworks, auction configurations and award scenario analysis across sourcing events.
- Navigated **downstream procurement** cycles comprising **Purchase Requisitions (PR)**, **Purchase Orders (PO)**, **Goods Receipts (GR)**, and **invoice** reconciliation, developing working knowledge of how transactional data flows through approval hierarchies in a live production environment
- Worked with **supplier lifecycle Performance (SLP)** on SAP Ariba, understanding **Contract Line Item Documents (CLIDs)**, contract authoring and workflows that bridge sourcing outcomes to operationally active agreements
- Developed a holistic understanding of the **Source-to-Pay (S2P) continuum** - from supplier discovery and competitive bidding through contract execution to payment - gaining intuition for how structured automation and compliance guardrails govern enterprise scale procurement operations

TECHNICAL SKILLS

Languages & Libraries: Python, NumPy, Scikit-learn, React

ML & AI: Classification, Regression, NLP, XGBoost, TF-IDF, SHAP, LIME, SMOTE, Model Evaluation, Genetic Algorithms

Backend & Systems: FastAPI, REST APIs, WebSockets, JWT Authentication

Databases: PostgreSQL, MongoDB, Redis, MySQL

Tools: Git, GitHub, Streamlit, MATLAB

PROJECTS

Distributed Real-Time Chat System — React · FastAPI · WebSockets · PostgreSQL · Redis · MongoDB

April 2026

- Architected a horizontally scalable **polyglot backend** handling 50+ concurrent **WebSocket** connections with <1 ms Redis Pub/Sub cross-instance message propagation and 3–6 ms end-to-end latency.
- Slashed message retrieval latency from 8–15 ms → <1 ms via Redis caching; diagnosed concurrency bug causing duplicate messages, achieving 100% delivery correctness post-fix.

Explainable Decision Intelligence Platform — Python · SHAP · LIME · ML · FastAPI

March 2026

- Built an end-to-end **ML pipeline (LightGBM, XGBoost, Random Forest, Logistic Regression)** with **SHAP & LIME** explainability, converting black-box outputs into ranked, actionable business recommendations.
- Proposed a novel **Decision Explainability Score (DES)** metric to quantify model trust; implemented what-if simulation with real-time outcome updates as users adjust inputs.

Multilingual Toxicity Detection System — Python · NLP · TF-IDF · SMOTE · REST API

October 2025

- Deployed a production classifier integrated with **YouTube, Reddit, and X APIs**, moderating multilingual English and Hinglish content with a custom **NLP pipeline**
- Applied **SMOTE** to tackle severe class imbalance, improving minority-class F1 and reducing harmful false-negatives; exposed a plug-and-play REST API for integration with any moderation pipeline.

Automated Neural Architecture Search via Genetic Algorithms — Python · Scikit-learn · Streamlit

March 2026

- Designed a **Genetic Algorithm** (elitism, crossover, mutation, fitness) to auto-evolve neural architectures, improving model fitness from ~0.75 → 0.91 across generations.
- Benchmarked evolved models against XGBoost, Random Forest & standard MLPs, achieving competitive accuracy while eliminating manual search; visualized population evolution live in a **Streamlit** dashboard.

LEADERSHIP & ACTIVITIES

Creatives Head – ECSA | Led team for large-scale college events and installations

Media Team – Google Developer Group | Content creation and technical branding

Volunteer – Kamal Foundation | Community service and program coordination

CERTIFICATIONS

Harvard CS50 – edX • Machine Learning with Python - L&T • CompTIA Security+ (SY0-701) - Udemy • Machine Learning Crash Course- Google for Devs • NoSQL & MongoDB - Infosys Springboard • Machine Learning Fundamentals - Infosys Springboard •
